

The background features two stylized, light blue dog faces. One is on the left, looking towards the right, and the other is on the right, looking towards the left. They are rendered in a simple, cartoonish style with large eyes and floppy ears.

# MyDaogs

LITEPAPER

VERSION 1.0.3

«MYDAOGS IS A WEB3 DAO  
PLATFORM THAT ALLOWS  
USERS TO EARN PASSIVE  
INCOME FROM MULTIPLE  
SAAS PET PROJECTS»

↳  
CORE  
CONCEPT

All revenues generated by  
products over time get distributed  
between token stakers based on  
their staking weights

# THERE ARE MULTIPLE WAYS OF EARNING WITH MYDAOGS:

- Stake tokens and receive **dividends** from products in USDT as well as **staking rewards** in native tokens

- Revolutionary **SafeExit** mechanism to sell with guaranteed profits before CEX&DEX listings

- Competition for a bigger staking weight potentially leads to **token price** growth

00.  
**EARNING STRATEGIES**

DISTRIBUTION

# TECHNICAL INFO V.0

MyDAOgs infrastructure has over 10 Solidity contracts syncing together:

(SYSTEM CONTRACT [administration]; TOKENS CONTRACTS [OMYG, MYG]; DIVIDENDS COLLECTOR CONTRACT; STAKING CONTRACT; SALES CONTRACTS [PRIVATE, PUBLIC, AIRDROP]; PRODUCT CONTRACTS [NUMBER IS GROWING]; MAINTENANCE CONTRACT [system costs])

**Thus, security audits are needed to ensure the system is safe.**

For this reason, the system is designed in two split parts so the first part is deployed on the mainnet to complete the Presale (OMYG token), then the second main part will be deployed once all audits are complete and tokens get swapped to MYG in 1:1 rate. All contracts are already deployed and fully available on the testnet from the very beginning so users can interact and test it out.

## TOKENS

### USD[T,C,...]

\*Dividends are paid off in the same token that the products are charging users. We thought of flexibility and made sure you can receive payouts in different tokens

### MYG

\*Main ecosystem token used for staking and staking rewards, maintenance costs payouts and trading on the exchanges

### OMYG

\*Presale token for early adopters, sold for the cheapest possible price, it will later get swapped to MYG
